## @ a glance

The Multiprotocol Industrial SMS Delivery Center is composed of a high-availability Embedded Industrial PC (Fanless, SSD, #2 Ethernet Port) and a pair of industrial GSM/GPRS/EDGE/3G/4G modems that supports two SIMs of commercial operators, in order to guarantee redundancy in sending SMS messages.
The system includes self-diagnosis functions, software redundancy broker (active/passive) and a back-up battery able to guarantee two hours of autonomy in case of power failure.
